

Device for dispensing plastic bags from rolls

Abstract

A plastic bag dispenser for serially dispensing and severing plastic bags, connected end-to-end and joined together along transverse perforation tear lines each with a separator slot, and unwound from a continuous strip, comprises a box having a front and a rear, an inner compartment for storing at least one roll of plastic bags, and a discharge opening, hook and ramp at the bottom of the compartment, the ramp sloping forwardly and downwardly between the front and rear for supporting and positioning the roll at the discharge opening across the bottom of the box whereby plastic bags are sequentially dispensed through the opening, the separator slot between the adjoining bags of the roll engaged by the hook and the outer bag detached from the roll. The dispenser includes a support stand, which incorporates a tubular vertical piece to support the box and position the discharge opening above the ground for ease of dispensing bags.
